GlobeView PRO

Smarter maritime intelligence. Proactive port risk advice.

Volatile trading conditions, rising geopolitical tensions, changing sanctions, and growing operational pressures are making voyage planning more complex. For shipowners, operators, charterers, and crew, having the latest information to hand is crucial for safer, smarter, and more commercially resilient trading and shipping.

GlobeView PRO (Port Risks Online) brings together maritime intelligence, voyage planning tools, risk assessments and port insights in one easy-to-use platform, so teams can make faster, better-informed decisions and avoid risks and costly disruption.

Why GlobeView PRO?

Information is everywhere, but the insight needed is often buried, and surfaced too late. GlobeView PRO bridges the gap between location data and risk reduction. It syncs your live AIS destination data with our security database, correspondents advice, and claims experience to automatically deliver tailored port risk advice – before a vessel arrives.

Instead of losing valuable time and effort digging through multiple sources for information, it comes directly to your team. As soon as a vessel sets a new destination, GlobeView PRO triggers an expert risk report, providing practical, actionable advice.

It gives decision-makers clear sight of possible risks before they turn into delays, disruption or claims, so shipowners, operators and charterers always stay one step ahead.

GlobeView PRO supports both shoreside teams and onboard crews to:

Monitor and
assess global
maritime
risks

Plan voyages
more
effectively

Access the
latest threat
and incident
information

Improve
operational
awareness

Make faster,
safer, better
trading
decisions

Manage
complex trading
environments

Features and benefits

Our enhanced GlobeView PRO functionality adds to the current range of features and benefits to Members and seafarers, including:

Comprehensive worldwide insights

Maritime security data, geopolitical developments, sanctions guidance and operational intelligence for major countries, global ports and trading regions.

Interactive voyage planning

See routes, identify potential hazards and assess operational risks before and during voyages.

Integrated fuel insights

Live access to VPS fuel quality and supply information across major worldwide bunkering ports.

Accessible anywhere, anytime

Available 24/7 from desktop, tablet or mobile, including lower-bandwidth environments onboard vessels.

Personalised experience

Save routes, areas of interest and vessel information to tailor the platform around your operations.

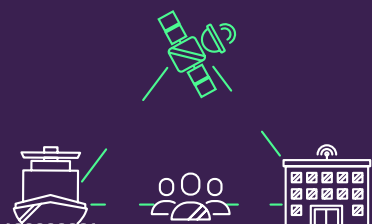

Single sign-on access

One login gives users access to GlobeView PRO and our wider digital ecosystem.

Included in your NorthStandard membership

GlobeView PRO is available to NorthStandard Members with no additional subscription or usage fees.
